CODE LED Error Codes Store the last five different error codes when each occured (via runtime counter) .The more recent error is displayed on top.A repeat of the error code on the top of the list just updates the runtime, 27 different error codes are me runtime. 27 different error codes are signalled from the TV LED :11 to 44. The error code is signalled as two separate digits with a suitable pause in-between and will repeat until the TV is fixed or fixes itself.

e.g. Error-code : 23 will be displayed : 2 flashes, short pause 3 flashes, long pause List of Errors Codes : see table

Mémorise les cinq derniers codes erreurs et affiche en haut d'écran les olus récents. 27 codes erreurs différents sont signalés par 2 digits selon une séquence spécifique Exemple:

Code erreur : 23 affiché 2 flashes, courte pause 3 flashes : longue pause

Voir cl-contre la liste des codes erreurs

Zeigt die letzen 5 Fehlercodes mit der Laufzei an. Der zuletzt aufgetretene Fehler steht an

erster Stelle.

Sollte ein Fehler wiederholt auftreten wird nur die Laufzeit aktualisiert.
Die Fehlercodes können im Menü Error Code angezeigt werden oder über die Kontroll LED angezeigt werden;

Beispiel für die Anzeige über die Kontroll LED

Fehlercode 23 Zweimaliges Blinken der LED, kurze Pause Dreimaliges Blinken der LED, lange Pause. Auflistung der Fehlercodes: siehe Liste

Memorizzare gli ultimi cinque codici d'errore (differenti tra loro) dopoche ognuno di essi si sarà presentato (attraverso il contatore della durata di esecuzione). L'errore più recente viene visualizzato in cima. La ripetizione del codice di errore in cima alla lista non farà altro che aggiornare la durata di esecuzione Dal LED della TV vengono segnalati 27 codici d'errore differenti, numerati da 11a 44. Il codice d'errore è indicato da due cifre separate da un opportuno intervallo di tempo e verrà ripetuto fino a quando il televisore non sarà stato riparato o non si

Il codice d'errore 23 visualizzerà: 2 segnali luminosi con pausa breve segnali luminosi con pausa lunga Per la lista del Codici d'Errore, si veda la tabella

Almacene los últimos cinco códigos de error cuando cada uno ocurre (gracias al contador de tiempo de ejecución). El error más reciente se visualiza en la parte superior. Una repetición del código de error en la parte superior de la lista solamente actualiza el tiempo de ejecución El indicador TV LED indica 27 códigos de error diferentes: de 11 a 44. El código de error se señala en forma de dos digitos separados con una pausa apropiada entre los dos y se repetirá hasta que repare el TV o él se repara a sí mismo Por ejemplo, Se va visualizar el código de error 23: 2 parpadeos, una pausa corta; Almacene los últimos cinco códigos de error 2 parpadeos, una pausa corta; 3 parpadeos, una pausa larga. Para la Lista de códigos de error, consulte la tabla

ALLGEMEINE INFORMATIONEN

VORGEHENSWEISE

1 - BEIM EINSCHALTEN

Beobachten Sie das Verhalten der 2-farbigen LED: Merken Sie sich das Einschalt- verhalten und vergleichen es mit den normalen Zyklen.

Hierdurch kann die Zeit bis der Fehlerzeitpunkt und die zu überprüfende Stufe festgestellt werden.

2 - TROUBLE SHOOTING ABLAUF: LED-VERHALTEN

In bestimmten Fällen leuchtet die LED zum Übertragen einer Fehlerinformation auf: LED Aufleuchten: Übertragung der Fehlerinformation Zählen der Fehlerinformation: Kodiert in zwei Impulsbündeln, unterbrochen durch 0,7 s Pause. Dieses wiederholt sich mehrere Male.

Sehen Sie in der Fehlercodetabelle

Diese Informationen sind genauer als Farbänderungen aber unvollständig, da verschiedene Ursachen denselben Code verursachen.

HINWEIS:

Im Service Mode ist es möglich die letzten Fehler-Codes aufzurufen, die sich in dem Fernsehgerät ereignet haben.

3 - FEHLERSUCHE

Funktionen der Stufen 1 und 2: Messungen mit dem Oszilloskop sind für die beiden separaten Vorgänge durchzuführen.

- a Das Gerät arbeitet ganz oder teilweise:
- Benutzen Sie die LED Informationen der Fehlersuchmethode 1 und 2. Schauen Sie ebenfalls bei Fehlersuche nach Symptomen nach.
- b Das Fernsehgerät schaltet permanent oder periodisch ab:
- Beobachten Sie das LED-Verhalten (rotes Aufleuchten, konstantes orange gefolgt von Aufleuchten, usw.)

Wählen Sie das zutreffende Kästchen in der Spalte: Fehlersuche durch LED-Verhalten.

INFORMATIONEN

Fernsehgeräte mit dem Chassis ICC19 arbeiten teilweise auch ohne die Module DVT, Sound, CRT, Chroma (50Hz) und VM Video (100Hz).

Dieser Punkt kann hilfreich sein wenn das Videomodul das Gerät in den Schutz-Mode schaltet.

Sehen Sie in die Geräte Konfigurationstabelle

GENERAL INFORMATION - LED BEHAVIOUR

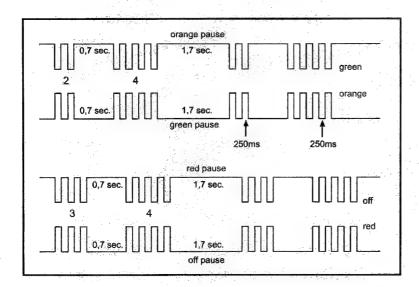

LED FLASHES

Message transmission.

The Error codes are signalled by the RED Standby LED.

Count number of flashes: error code is signalled in two burst separated by a 0.7 s pause and repeated several times.

There is 1.7 s between each code sequence.

GENERAL INFORMATION

METHODOLOGY

1 - SWITCHING "ON" THE TV:

- Observe the behaviour of the two-coloured LED: note the various stages and compare them with the normal cycle of events.

By watching this, the point at which the problem arises and the part of the circuit which needs to be investigated can be identified.

2 -TROUBLE SHOOTING PROCEDURE: LED BEHAVIOUR

In certain cases a flashing LED signifies the transmission of an error code message:

LED flashes: message transmission.

Count the flashes: coded into two bursts separated by a pause of 0.7 s and repeated several times.

See the error code table.

This data is more precise than LED colour changes, however, since various fault conditions generate the same error code the information signalled may be imcomplete.

Please Note:

In the service mode, it is possible to consult a record of the last error codes which have occurred in the television set.

3 - FAULT FINDING:

Operation stages 1 and 2: an oscilloscope test is carried out according to two separate processes.

a - The television set operates fully or partially

- Use LED message observation fault finding methods 1 and 2. See also the fault related to fault finding by symptom.

b - The television set goes into permanent or cyclical security mode

- Observe LED behaviour (flashing red, stable orange followed by flashing, etc.). Select the relevant box in the column (LED behaviour fault finding).

INFORMATION

The ICC19 television will partially operate without the DVT, SOUND, CRT, CHROMA (50 Hz) and VM video (100 Hz) modules remoded.

This point may be useful if the video module causes the TV to switch to security mode.

See the television configuration table

FEHLERSUCHE IM RPC19

- Achtung! Jede der vorgeschlagenen Manipulationen muß bei abgeschaltetem Gerät durchgeführt werden (Hauptnetzschalter aus).
- Alle Arbeiten, die bei eingeschaltetem Gerät durchgeführt werden, können Bauteile zerstören!
- Einen Trenntrafo verwenden.

Überprüfung der digitalen konvergenzeinheit

- Der IC sollte eine ordnungsgemäße 5 V-Versorgung besitzen.
- PWAT Pin 26 von IK01 muß >+4 V sein, andernfalls bleibt der IC im Reset.
- Die +-15 V-Versorgung von PS muß anliegen und >13 V sein.
- H- und V-Synchronisierung müssen an Pin 22 und Pin 55 von IK01 anliegen
- Am Pin 40 (REFO) muß +1 V anliegen.
- An den Pins DABV, DAGV und DARV (43, 44 und 45) von IK01 muß +1 V anliegen.
- An den Pins DABH, DAGH und DARH (49 und 50) von IK01 muß +1 V anliegen.
- An Pin 14 (ECLK) von IK01 muß ein 8,5 MHz-Takt anliegen.

Überprüfen des Konvergenznetzeiles

Arbeiten an einem defekten Gerät sind nur mit einem **Trenn netztransformator** zulässig. Wenn kein Konvergenzbild am Bildschirm angezeit wird, so können Sie das Konvergenznetzteil für sich prüfen.

Führen Siefolgende Schritte durch:

- 1. Netz ausschalten.
- 2. Die Verbindung von BP260 zwischen der DCU-Platine und der Konvergenz-Spannungsquelle abziehen.
- 3. Einen Widerstand von 270R/10W zwischen +15 V und 15 V anschließen (zum Beispiel zwischen die Kathode von DP267 und der Anode von DP265).
- 4. Den Kollektor und den Emitter von TP238 miteinander verbinden.
- 5. Netz einschalten.

TROUBLESHOOTING RP C19

- All of the following tests must be carried out with the MAINS switched OFF.

Any operations carried out with the MAINS switched ON may lead to components being destroyed.

- Use isolating mains transformer.

DIGITAL CONVERGENCE UNIT CHECK

- IC should have correct +5V supply
- PWAT pin 26 of IK01 must be >+4V otherwise the IC is kept in reset.
- The + 15V from the PS must be present and >13V
- H and V sync must be present pin nr. 22 and 55 of IK01
- at the pin REFO nr. 40 + 1V must be present.

- at the pin ECLK nr. 14 of IK01 a 8.5Mhz clock must be present

DIGITAL CONVERGENCE UNIT POWER SUPPLY TROUBLESHOOTING

If you have not a convergence picture on the screen it's possible to check the convergence power supply for itself.

Do the following steps.

- 1. Switch off the mains
- 2. Remove the connection of BP260 between the DCU board and the convergence power supply
- 3. Connect a resistor of 270R/10W between +15V and -15V. For examplee cathode of DP267 and anode of DP265.
- 4. Make a short circuit between collector and emitter of TP 238.
- 5. Switch on the mains.

POWER SUPPLY CHECK AND FIND «PROT» FAILURE

All of the following tests must be carried out with the MAINS switched OFF.

Any operations carried out with the MAINS switched ON may lead to components being destroyed.

to analyse a «PROT» fault condition it is possible to use the following test configuration. In this configuration the power supply will be working with its normal regulation loop, the deflection stage and any "PROT" information is disabled in order to locate the cause of the problem.

- Switch «ON» TV: Measure the following voltages.

ALLGEMEINE INFORMATIONEN

VORGEHENSWEISE

1 - BEIM EINSCHALTEN

Beobachten Sie das Verhalten der 2-farbigen LED: Merken Sie sich das Einschalt- verhalten und vergleichen es mit den normalen Zyklen.

Hierdurch kann die Zeit bis der Fehlerzeitpunkt und die zu überprüfende Stufe festgestellt werden.

2 - TROUBLE SHOOTING ABLAUF: LED-VERHALTEN

In bestimmten Fällen leuchtet die LED zum Übertragen einer Fehlerinformation auf: LED Aufleuchten: Übertragung der Fehlerinformation Zählen der Fehlerinformation: Kodiert in zwei Impulsbündeln, unterbrochen durch 0,7 s Pause. Dieses wiederholt sich mehrere Male.

Sehen Sie in der Fehlercodetabelle

Diese Informationen sind genauer als Farbänderungen aber unvollständig, da verschiedene Ursachen denselben Code verursachen.

HINWEIS:

Im Service Mode ist es möglich die letzten Fehler-Codes aufzurufen, die sich in dem Fernsehgerät ereignet haben.

3 - FEHLERSUCHE

Funktionen der Stufen 1 und 2: Messungen mit dem Oszilloskop sind für die beiden separaten Vorgänge durchzuführen.

- a Das Gerät arbeitet ganz oder teilweise:
- Benutzen Sie die LED Informationen der Fehlersuchmethode 1 und 2. Schauen Sie ebenfalls bei Fehlersuche nach Symptomen nach.
- b Das Fernsehgerät schaltet permanent oder periodisch ab:
- Beobachten Sie das LED-Verhalten (rotes Aufleuchten, konstantes orange gefolgt von Aufleuchten, usw.)

Wählen Sie das zutreffende Kästchen in der Spalte: Fehlersuche durch LED-Verhalten.

INFORMATIONEN

Fernsehgeräte mit dem Chassis ICC19 arbeiten teilweise auch ohne die Module DVT, Sound, CRT, Chroma (50Hz) und VM Video (100Hz).

Dieser Punkt kann hilfreich sein wenn das Videomodul das Gerät in den Schutz-Mode schaltet.

Sehen Sie in die Geräte Konfigurationstabelle

^{(1):} If the CRT is not connected, the voltage across CL046 will increase up to 250V instead 202V, this is due to the lack of a discharge path. Before to reconnecting BL050 and BP110 it is **imperative to discharge** CL046 with a resitor (22k or 33k).

GENERAL INFORMATION

METHODOLOGY

1 - SWITCHING "ON" THE TV :

- Observe the behaviour of the two-coloured LED: note the various stages and compare them with the normal cycle of events.

By watching this, the point at which the problem arises and the part of the circuit which needs to be investigated can be identified.

2 -TROUBLE SHOOTING PROCEDURE: LED BEHAVIOUR

In certain cases a flashing LED signifies the transmission of an error code message:

LED flashes: message transmission.

Count the flashes: coded into two bursts separated by a pause of 0.7 s and repeated several times.

See the error code table.

This data is more precise than LED colour changes, however, since various fault conditions generate the same error code the information signalled may be imcomplete.

Please Note:

In the service mode, it is possible to consult a record of the last error codes which have occurred in the television set.

3 - FAULT FINDING:

Operation stages 1 and 2: an oscilloscope test is carried out according to two separate processes.

a - The television set operates fully or partially

- Use LED message observation fault finding methods 1 and 2. See also the fault related to fault finding by symptom.

b - The television set goes into permanent or cyclical security mode

- Observe LED behaviour (flashing red, stable orange followed by flashing, etc.). Select the relevant box in the column (LED behaviour fault finding).

INFORMATION

The ICC19 television will partially operate without the DVT, SOUND, CRT, CHROMA (50 Hz) and VM video (100 Hz) modules remoded.

This point may be useful if the video module causes the TV to switch to security mode.

See the television configuration table.
